

Calling for the next generation of friction fighters!

Lubricant products keep planes in the air, cars on the road, machines in business, and households and hospitals running efficiently.

Why choose a career in lubricant manufacturing?

Learn and grow in high-energy, solution-oriented environments

Support sustainability efforts by reducing waste of equipment and enabling renewable energy

Average salary is **26%** higher than comparable North American careers

Solve critically important issues like reducing automotive emissions

Enables career mobility, allowing people to explore different roles within a company

“As the industry becomes more progressive by including things like automative processes, cutting lab equipment, it is really receptive to fresh ideas that move us from old to new. I believe a young mind is especially valuable to this movement.”

Sophie Grimm
Petroleum Chemist,
Allegheny Petroleum Products
